SKILLS

HTML5 CSS3
Javascript
React JS
NEXT JS
React Native
Git and Github
Typescript
Tailwind CSS
Dasyui UI
Bootstrap
.

DEVELOPMENT EXPERIENCE

Recently, I learned React JS and Next.js, creating projects like a Meme Maker, To-Do App, Blogging App, Chat App Weather App and More. After that, I started learning React Native to build mobile applications.

Blogging App

- This blogging app, built with React.js and Firebase, provides a secure and interactive platform for users to create and manage blog posts. It includes user authentication through signup, email sign-in, and options to sign in with Google or GitHub. Only authenticated users can access and view all available blogs. Once logged in, users can also create, edit, and delete their own blog posts, enabling a personalized and engaging blogging experience

Chat App

- This real-time chat app, built with React.js and Firebase, connects users instantly. Users can sign up or sign in using email, Google, or GitHub, then join chat rooms securely. Firebase enables instant messaging across all users, creating a fast, reliable chat experience. The app's simple interface makes it easy to join conversations, create rooms, and chat in real-time.

Weather App

- This weather app, built with React.js, provides real-time weather updates for any location. Users can search cities to get current conditions, temperature, humidity, and forecasts. The app's clean interface displays data clearly, making it easy to check weather details at a glance. Powered by a weather API, it delivers accurate and up-to-date information.

EDUCATION

2020 - 2022

STUDENT ACADEMY SCHOOL

- MATRIC

2023 - 2025

DJ SCIENCE GOVT COLLEGE

- INTERMEDIATE
